## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 4, 7, 10, drawn to an assay method using a biochemical analysis unit, classified in class 435, subclass 7.1.
  - II. Claims 2-3, 5-6, 8-9, and 11-12, drawn to an assay method using a biochemical analysis unit, classified in class 435, subclass 286.5.
  - III. Claims 13-20, drawn to a biochemical analysis apparatus, classified in class 422, subclass 57.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are unrelated, distinct, and independent. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. Group I is a method with the step wherein a liquid, which has been subjected to gas content decreasing processing for decreasing the content of a dissolved gas, is employed as the liquid, which is forcibly caused to flow, which is a step that Group II lacks. Group II is a method with the step wherein

Art Unit: 1641

bubble removing processing for removing bubbles, which are present in the liquid, from the liquid is performed during the flowing of the liquid, which is a step that Group I lacks.

Therefore, Groups I and II have different modes of operation and different functions that distinguish them as unrelated, distinct, and independent inventions.

4. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in the materially different process of liquid filtration.

This relationship also applies to Groups II and III.

5. Because these inventions are distinct for the reasons given above and the search required for each of Groups I-III is not required for the other Groups, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Jeff Schmidt on 12 August 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1641

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leon Y Lum whose telephone number is (571) 272-2878. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (571) 272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
